Abstract

The abstract text goes here.

1 Introduction

From the beginning of the project the intention of the project has been to develop a mathematical equation to evaluate escort mission maps and to procedurally generate maps that can successfully follow the evaluation technique created. The dissertation produced underneath documents the processes and work that were involved in achieving this honours project.

1.1 Motivation

With video games being one of the largest markets in the world right now being pa

1.2 Aims and Objectives

The aim of the project is to create, implement and evaluate an algorithm that assesses escort mission maps once this has been complete, The next task is to plan, develop
